

MDD of a_2 MDD of a_3 MDD of a_1 : $(0,0) \rightarrow (2,2)$ MDD of a_2 : $(2,0) \rightarrow (0,2)$ 

one cell each at level 1:
 $\langle a_2, a_3, (2,1), 1 \rangle$ is cardinal

red cells are shared at the same level, but both MDDs have alternatives:
 the conflicts at $(1,0)$, $(1,1)$, $(1,2)$ are non-cardinal
